

SMC DIRECTLINE

The fully automated production line
for fiber-reinforced thermoset material

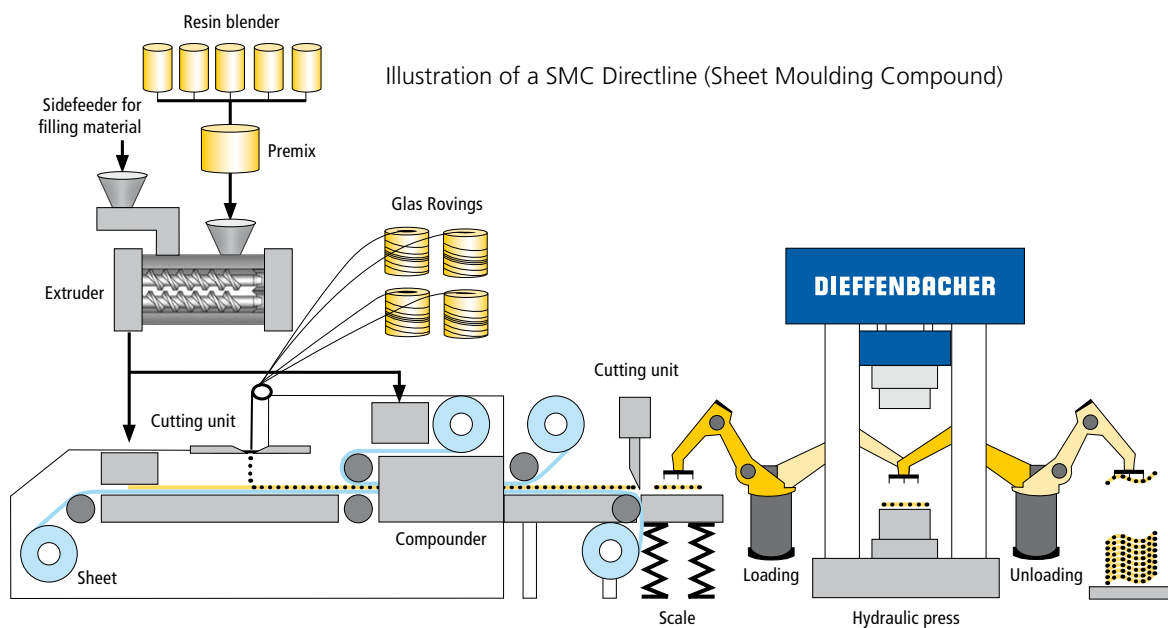

Winner of AVK innovation award 2011 for:

- Consistent Class-A quality at a high level
- Continuous process with a high degree of automation
- Complete control, visualization and documentation of all process parameters
- Reproducible fiber impregnation
- Energy and cost savings in the storage and transport process steps
- Individual recipes optimized to particular components, with a high glass-fiber content

SMC DIRECTLINE

The fully automated production line
for fiber-reinforced thermoset material

Semifinished parts production – Just-in-time

The technology of direct compounding bypasses the cost-intensive steps of banding, storing and logistical handling that used to be required for SMC semifinished parts, so that variations in quality are avoided. The precisely reproducible process and direct further processing of the preform guarantee constant quality levels. SMC Directline is flexibly applicable in various applications and individual lot sizes.
