

Dieffenbacher presents turnkey plants for the production of pellets

At the next Interpellet trade fair from 7- 9 October 2009 in Stuttgart, the Dieffenbacher Group will present its turnkey plants for the economical production of pellets.

The know-how gained by Dieffenbacher from many references in the wood panel industry, especially from particleboard plants, is directly transferable to pellet plants and guarantees a sound plant concept.

Major elements (heat energy generation, dryer, screen, cleaning, electric, process control, plant engineering) are available in house and also by integrating superior sub suppliers a fast and smooth start-up is achieved. Dieffenbacher guarantees the plant capacity and the product quality as well as other major parameters.

Especially important for the quality of the pellets and for low wear part costs of the pellet presses and the hammer mills is the cleaning of the furnish from minerals. The Dieffenbacher ClassiCleaner takes care of this.

The pellet plants are offered for all raw materials (logs, sawmill residuals, whole tree chips and some kinds of recycled wood) and for the use of the pellets in power plants as well as in household stoves.

Dieffenbacher covers annual plant capacities from 200,000 to more than 600,000. A world-wide service net and comprehensive service achievements including 24hr on-line support guarantee a permanently high availability of the plants. **PFA**
